Enes Eren

AI Automation Engineer · Multi-Agent Systems Architecture · GTM Automation

Istanbul, Turkey (UTC+3) · erenes1667@gmail.com · linkedin.com/in/enes-eren-71a51b150 · github.com/erenes1667

I design, build and run production AI agent systems. At a US digital agency I built the in-house outbound product, an agent architecture of 32 role agents and 47 guard hooks, and automation that runs around the clock on a Linux server I run myself. I work remote from Istanbul with daily US overlap, own projects end to end, and come from game design, so I design for the person using the tool.

EXPERIENCE

AI Automation Specialist · Optimum7 and Zen Media — Dec 2024 to Present

US digital marketing agency, Coral Gables, FL · remote from Istanbul

- **Earned a raise in Feb 2026** after a live demo of my agent system to the CEO. I built AI automation for client email, outbound sales and internal tools.
- **Knock, outbound product:** built the agency's contact-form outreach platform in Next.js, Prisma and PostgreSQL with a Python worker. 23 data models, 70 API routes, 1,400+ commits, deployed as systemd services with timers.
- **Agent architecture:** designed a multi-agent setup on Claude Code with 32 role agents, a supervised worker runner with a 9-call circuit breaker, and 47 guard hooks that enforce pre-send QA and cost routing, including a cheap LLM judge on outbound text. Each task goes to the cheapest model that can do it (Haiku, Sonnet or Opus).
- **Knowledge layer:** agents read 225 expertise notes, each written after a real failure, and a 7,900-document full-text index (SQLite FTS5, keyword search) before they act. LLM-as-judge critic loops score agent outputs before a human sees them.
- **Production ops:** run 55 scheduled jobs and 10+ always-on services on a Linux VPS, including a Telegram assistant on the Claude API with prompt caching and landing-page monitors that check every 3 hours.
- **Client tools:** Client OS onboarding hub (Express 5, Supabase, Railway, 600+ commits); a Stripe checkout and post-purchase upsell API with Slack alerts to sales; an AMP interactive email engine (in-email ratings, surveys, reorder).
- **Data and GTM pipelines:** B2B lead scoring for a US software company (site-visitor intelligence, Clay enrichment, 11 n8n workflows, Salesforce routing, Google Sheets staging); cold-email production with StoreLeads, LeadMagic and Snov enrichment on Mailgun and Instantly.
- **Lifecycle email:** strategy for 7 US e-commerce and B2B brands, including Garrett Metal Detectors and Fasteners Direct, on Klaviyo and Beehiiv, with an automatic check of links, images and renders before every send.
- **Speech on local GPU:** Whisper large-v3 on a local RTX 4080 GPU transcribes and translates team voice and video notes at no per-minute cost.

Project Manager and Game Designer · Studio Of The Hawk — Oct 2023 to Dec 2024

Game studio of the Hawk gaming-chair brand · Istanbul

- Managed 13 mobile game projects from concept to App Store launch.
- Set up n8n workflow automations that saved the team 10+ hours a week.

Earlier: Game Designer, Smartlabs Visual Media Technologies, Istanbul (Jul 2022 to Jan 2023) · SEO Intern, BoostRoas, Istanbul (Jan to Mar 2023)

SKILLS

AI and agents	Claude API (tool use, prompt caching), Claude Code, MCP, multi-agent orchestration, model routing, LLM-as-judge evaluation, Whisper
Engineering	TypeScript, Next.js, Node.js and Express, Python, Prisma, PostgreSQL, Supabase, SQLite FTS5, REST and webhooks, Stripe, Linux and systemd, Playwright
Automation and GTM	n8n, Clay, Salesforce, Klaviyo, Beehiiv, Mailgun, Instantly, GoHighLevel, AMP for Email
Languages	Turkish (native), English (fluent, daily work with US clients and leadership)

EDUCATION

BA, Digital Game Design — 2019 to 2024

Istanbul Aydin University · GPA 3.4 / 4.0
